To whom it may concern:

**RE: Leoch Battery With the type of DJW series from 7Ah to 35Ah
Battery life classification under EUROBAT**

The 'EUROBAT' Guide For The Specification of Valve Regulated Lead-Acid Stationary Cells and Batteries' is a battery buyers guide produced and published by a predominantly European trade association of battery manufacturers – 'The Association of European Accumulator Manufacturers.' The publication does not represent any national standards for battery specification and should not be confused with such standards. Part of the guide is based around an IEC specification, IEC60896-2.

If we consider the design life indicated in the EUROBAT objectives, we would place the above referenced battery type as having comparable design life to the 'Long Life' definition established by EUROBAT.

This definition purports a design life of 10 – 12 years.

EUROBAT guide defines life expectancy calculated at 20°C operation above this temperature for prolonged periods will have an effect on battery life.

Leoch Batteries confirms that the DJW series from 7Ah to 35Ah is classified a 10 – 12 year design life. This statement acts as clarification in line with all other manufacturers who offer this classification of product.

Yours sincerely

Eileen Zhao

Vice President
