| LCA accountability: <i>Thomas Eknor Morrell, Katarzyna Dziubanii, Niclas Silfverstrand, Ramboll Sweden AB.</i> |
| Third-party verification |
| Independent third-party verification of the declaration and data, according to ISO 14025:2006, via: <input checked="" type="checkbox"/> EPD verification by individual verifier Third-party verifier: <i>Håkan Stripple, IVL Swedish Environmental Research Institute P.O. Box 53021, SE-400 14 Gothenburg, Sweden Hakan.Stripple@IVL.se, www.IVL.se</i> Approved by: The International EPD® System |
| Procedure for follow-up of data during EPD validity involves third party verifier: <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No |

The EPD owner has the sole ownership, liability, and responsibility for the EPD.

EPDs within the same product category but registered in different EPD programmes, or not compliant with EN 15804, may not be comparable. For two EPDs to be comparable, they must be based on the same PCR (including the same version number) or be based on fully-aligned PCRs or versions of PCRs; cover products with identical functions, technical performances and use (e.g. identical declared/functional units); have equivalent system boundaries and descriptions of data; apply equivalent data quality requirements, methods of data collection, and allocation methods; apply identical cut-off rules and impact assessment methods (including the same version of characterisation factors); have equivalent content declarations; and be valid at the time of comparison. For further information about comparability, see EN 15804 and ISO 14025.

Company information

Owner of the EPD:

MP bolagen Industri AB

Contact:

Markus Wanke, markus.wanke@mpbolagen.se

Description of the organisation:

MP bolagen Industri AB develop, manufacture and market a wide range of products for cable management systems for the electrical industry. The production takes place in Ekenässjön outside Vetlanda, Sweden. MP bolagen's goal is to be one of the electricity industry's best suppliers when it comes to quality, delivery, reliability, and customer service. The company is certified according to ISO standard, ISO 9001 and 14001.

Product-related or management system-related certifications:

MP bolagen is certified according to ISO 9001 and 14001.

Name and location of production site(s):

Name: Ekenässjön

Location: Barkvägen 7, 574 91 Ekenässjön, Sweden

Product information

Product name:

Hot-dip galvanized accessories (Z)

Product identification:

Swedish name: Varmförzinkade tillbehör (Z)

Product description:

This EPD covers accessories made from made from cold rolled steel. The products are then hot-dip galvanized with a zinc layer of 60 µm thickness. The zinc layer is in accordance with ISO SS-EN 1461, offers protection due to its low electrode potential and slow corrosion rate. Products that are hot-dip galvanized are suited for installation in environments with high corrosion rate.

Geographical scope:

The study represents the Nordic market, i.e. the Nordic countries: Denmark, Finland, Iceland, Norway and Sweden.

LCA information

Declared unit:

1 metric tonne of product.

Reference service life:

N/A

Time representativeness:

Reference year: 2022

Database(s) and LCA software used:

LCA calculations were performed with the LCA software LCA for Experts (version 10.7.0.183), using life cycle inventory (LCI) data from Professional database Version CUP 2023.01 and Ecoinvent 3.8. The EN15804 reference package based on EF 3.1 has been used.

Description of system boundaries:

Cradle to gate with modules C1–C4 and module D (A1–A3 + C + D)

System

diagram:

The thousand separator and decimal mark in this EPD follow French version of SI style: 1 234,56 (number with six significant figures is shown for illustrative purpose only).

Product stage, A1-A3:

The product stage comprises the acquisition of all raw materials, products and energy, transport to the production site, production processes, packaging, and waste processing up to the end-of-waste state or final disposal for non-product wastes.

More specifically, this module includes the upstream processes of extraction and processing of raw materials and the transportation of the input materials to the production site included in the study. Furthermore, it includes the core processes of producing the final product – hot-dip galvanized accessories (Z), including the impacts from extraction and processing of fuels and auxiliary materials and their transportation to the production site. The module also includes the production of purchased electricity used at the production site. Accessories have a hot dip galvanized surface treatment done externally for which materials, energy and transportation are included.

End of life, C1-C4:

Hot-dip galvanized accessories (Z) are sold in the Nordic countries, with Sweden contributing to the largest share. Statistics for Swedish waste management is therefore used as proxy for the Nordic market. 95% of the materials are assumed to go to recycling and the remaining 5% to landfill.

Module C1 comprises the deconstruction of the product. It has been assumed that the deconstruction of the product is a part of the demolition or renovation of a building, which also can include manual work. Therefore, the environmental impacts of the deconstruction process of the product have been viewed as negligible and set equal to zero.

Module C2 includes the transport between the deconstruction site and either recycling facility or landfill. A distance of 100 km has been assumed for both transport to recycling and to a landfill, since no specific information is available.

Module C3 comprises recycling of the materials, within which the processes connected to recycling are included.

Module C4 comprises the disposal of materials, within which the processes connected to landfill are included.

Re-use, recovery and recycling potential, D:

Module D includes reuse, recovery and/or recycling potentials, expressed as net impact and benefits. In this case, it is assumed that module D includes the potential benefits from avoided production of steel through recycling of the net (virgin) share of materials in the product lifecycle. Furthermore, 10% losses associated with the remelting of the metal are assumed to occur outside of the system boundaries.

Additional LCA information

Cut-off rules

General cut-off criteria as defined in EN15804 are followed. Life cycle inventory data shall according to EN 15804 include a minimum of 95% of total inflows (mass and energy) per module. No known inflows were left out.

Data quality

All processes with a significant impact have high quality datasets.

Allocation

The manufacturing process produces pre-consumer scrap as a co-product. Economic allocation is used, which allocates part of the pre-consumer scrap's impact to the product.

End-of-life Scenario

| End-of-life processes expressed per declared unit | | |
|---|------------------------------|--------|
| Process | Unit | Amount |
| Assumptions for transportation | km to recycling and landfill | 100 |
| Recycling process | kg to recycling | 950 |
| Disposal process | kg to landfill | 50 |

Modules declared, geographical scope, share of specific data (in GWP-GHG results) and data variation (in GWP-GHG results):

| | Product stage | | | Construction process stage | | Use stage | | | | | | | End-of-life stage | | | | Resource recovery stage |

X = modules declared, ND = Not Declared

Content information

| Product components | Weight, kg | Post-consumer recycled material, weight-% per DU | Biogenic material, weight-% per DU | Biogenic material, kg C per DU |
|---------------------|------------|--|------------------------------------|--------------------------------|
| Steel with coating | 1000 | Unknown | 0 | 0 |
| TOTAL | 1000 | Unknown | 0 | 0 |
| Packaging materials | Weight, kg | Post-consumer recycled material, weight-% per DU | Biogenic material, weight-% per DU | Biogenic material, kg C per DU |
| LDPE | 1,97 | 0 | 0 | 0 |
| TOTAL | 1,97 | 0 | 0 | 0 |

The products do not contain any of the substances listed on the “Candidate List of Substances of Very High Concern (SVHC) for authorisation” (http://echa.europa.eu/chem_data/authorisation_process/candidate_list_table_en.asp).

Packaging

Consumer packaging: Accessories are packed in plastic bags – 10 pieces per one bag.

Recycled material

Provenience of recycled materials (pre-consumer or post-consumer) in the product:

Steel used to produce Z accessories contains an unknown share of post-consumer scrap.

Results of the environmental performance indicators

The estimated impact results are only relative statements, which do not indicate the endpoints of the impact categories, exceeding threshold values, safety margins and/or risks.

Mandatory disclaimer: It is not advised to use the results of modules A1-A3 without considering the results of module C.

Mandatory impact category indicators according to EN 15804

| Results per 1 metric tonne of hot-dip galvanized accessories (Z) | | | | | | | |
