

Environmental Product Declaration (EPD)
According to ISO 14025 and EN
15804+A2:2019

Presence detector - 4000 series

Registration number:	EPD-Kiwa-EE-204636-EN
Issue date:	04-07-2025
Valid until:	04-07-2030
Declaration owner:	Steinel GmbH
Publisher:	Kiwa-Ecobility Experts
Programme operator:	Kiwa-Ecobility Experts
Status:	verified

1 General information

1.1 PRODUCT

Presence detector - 4000 series

1.2 REGISTRATION NUMBER

EPD-Kiwa-EE-204636-EN

1.3 VALIDITY

Issue date: 04-07-2025

Valid until: 04-07-2030

1.4 PROGRAMME OPERATOR

Kiwa-Ecobility Experts
Wattstraße 11-13
13355 Berlin
DE

Raoul Mancke

(Head of programme operations, Kiwa-Ecobility Experts)

Dr. Ronny Stadie

(Verification body, Kiwa-Ecobility Experts)

1.5 OWNER OF THE DECLARATION

Manufacturer: Steinel GmbH

Address: Dieselstraße 80-84, 33442 Herzebrock Clarholz, Germany

E-mail: info@steinel.de

Website: <https://www.steinel.de/de/steinel-group/>

Production location: Steinel Romania

Address production location: DN73C 79, 115300 Curtea de Arges, Romania

1.6 VERIFICATION OF THE DECLARATION

The independent verification is in accordance with the ISO 14025:2011. The LCA is in compliance with ISO 14040:2006 and ISO 14044:2006. The EN 15804+A2:2019 serves as the core PCR.

☐ Internal ☒ External

Kripanshi Gupta, Kiwa GmbH

1.7 STATEMENTS

The owner of this EPD shall be liable for the underlying information and evidence. The programme operator Kiwa-Ecobility Experts shall not be liable with respect to manufacturer data, life cycle assessment data and evidence.

1.8 PRODUCT CATEGORY RULES

Kiwa-Ecobility Experts (Kiwa-EE) – General Product Category Rules (2022-02-14)

PEP Ecopassport: PSR-0005-ed3.1-EN-2023 12 08 Electrical switchgear and control gear Solutions

1.9 COMPARABILITY

In principle, a comparison or assessment of the environmental impacts of different products is only possible if they have been prepared in accordance with EN 15804+A2:2019. For the evaluation of the comparability, the following aspects have to be considered in particular: PCR used, functional or declared unit, geographical reference, the definition of the system boundary, declared modules, data selection (primary or secondary data, background database, data quality), scenarios used for use and disposal phases, and the

1 General information

life cycle inventory (data collection, calculation methods, allocations, validity period). PCRs and general program instructions of different EPD program operators may differ. Comparability needs to be evaluated. For further guidance, see EN 15804+A2:2019 and ISO 14025.

1.10 CALCULATION BASIS

LCA method R<THINK: Ecobility Experts | EN15804+A2

LCA software*: Simapro 9.6

Characterization method: R<THINK characterization method (see references for more

details)

LCA database profiles: ecoinvent (for version see references)

Version database: v3.19 (20250306)

** Simapro is used for calculating the characterized results of the Environmental profiles within R<THINK.*

1.11 LCA BACKGROUND REPORT

This EPD is generated on the basis of the LCA background report 'Presence detector - 4000 series' with the calculation identifier ReTHiNK-104636.

2 Product

2.1 PRODUCT DESCRIPTION

The sensors of the 4000-series are **infrared** presence detector.

This Environmental product declaration can be used for the following products:

Product	
MD IR 4360-24 COM1	MD-24 ECO COM1
MD IR 4360-8 COM1	MD-8 ECO COM1
PD IR 4360-24 COM1	PD-24 ECO COM1
PD IR 4360-24 KNX	PD-24 ECO DALI2-IPD
PD IR 4360-8 COM1	PD-24 ECO KNX
PD IR 4360-8 KNX	PD-8 ECO COM1
PD IR 4360-8 DALI2-IPD	PD-8 ECO DALI2-IPD
PD IR 4360-24 DALI2-IPD	PD-8 ECO KNX

The PD IR 4360-24 DALI2-IPD was used as the reference product for this representative EPD due to similar components and weights.

Materials	kg	%
Plastic - Polycarbonate	0,163	67,6
Metal - Copper	0,001	0,5
Metal - Steel	0,009	3,7
Electronic Components	0,024	10,1
Electronic PCB	0,019	7,7
Paper	0,010	4,1
other	0,015	6,2
total	0.242	100

Packaging Materials	kg	%
Packaging – Cardboard	0.070	100
total	0.070	100

More product information can be found on the company website: <https://www.steinel.de/steinel-group/>

2.2 APPLICATION (INTENDED USE OF THE PRODUCT)

Presence detectors are devices installed in buildings that are used to control, monitor and set up the lighting system. They enable automatic changes and scenario settings.

2.3 REFERENCE SERVICE LIFE

RSL PRODUCT

the RSL was defined using PSR-0005-ed3.1-EN-2023 12 08 (Electrical switchgear and control gear Solutions). An active product from the other equipment category (chapter 3.15) was selected for this purpose. The service life was therefore assumed to be 10 years.

USED RSL (YR) IN THIS LCA CALCULATION:

10

2 Product

2.4 TECHNICAL DATA

For the placing on the market in the European Union/European Free Trade Association (EU/EFTA) (with the exception of Switzerland) the following legal provisions apply:

- Safety 2014/35/EU
- EMC 2014/30/EU
- RoHS Directive 2011/65/EU

The CE-marking takes into account the proof of conformity with the respective harmonized standards based on the legal provisions above.

For the application and use the respective national provisions apply.

The products are developed and tested in accordance with internal and external standards and comply with country-specific standards.

2.5 SUBSTANCES OF VERY HIGH CONCERN

The presence detectors may contain the following SVHC with a content greater than 0.1 mass%.

LEAD with CAS-Nr. 7439-92-1

Information about the SVHC are available on the following website:

<https://www.steinel.de/de/leuchten-sensoren/service/unser-serviceangebot/reach/>

2.6 DESCRIPTION PRODUCTION PROCESS

Country	City	Business
Germany	Herzebrock Clarholz	Warehouse / Development
Germany	Leipzig Mölkau	Production plastic parts
Switzerland	Einsiedeln	Electronic production
Romania	Curtea de Arges	Assembly

The presence detectors are produced at three locations and then stored in Herzebrock Clarholz and delivered to customers. All locations are certified in accordance with the environmental management standard 14001:2015.

The Injection molded parts are produced at the Leipzig-Mölkau site. The resulting production waste, which averages 5%, can normally be reground and reused. However, we consider the 5% to be production waste in our calculation.

The Printed circuit boards are produced in Einsiedeln. Here, the PCBs are fitted with electronic components using THT and SMD processes at the Swiss site in Einsiedeln.

The preproducts manufactured in Mölkau and Einsiedeln are assembled and packaged in Curtea de Arges together with other purchased preproducts and then transported to the dispatch warehouse in Herzebrock-Clarholz.

Steinel determined the electricity, gas, oil and water consumption per product for the sites by dividing the annual consumption by the production figures. The activity data collected by the company related to the year 2023.

2.7 CONSTRUCTION DESCRIPTION

To install the Sensors, holes must be drilled in the ceiling or wall. A drill is required for the construction. The Presence detector is then mounted to the ceiling or wall by using screws and a screwdriver.

2 Product

Due to the short use of the drill, It is assumed that energy consumption and construction waste during installation is negligible.

3 Calculation rules

3.1 DECLARED UNIT

Presence detector - 4000 series

One Unit [piece] of the presence detectors with passive infrared of the 4000 series are for light management in buildings or interiors with a service life of 10 years.

Reference unit: piece (p)

3.2 CONVERSION FACTORS

Description	Value	Unit
Reference unit	1	p
Weight per reference unit	0.242	kg
Conversion factor to 1 kg	4.138422	p

3.3 SCOPE OF DECLARATION AND SYSTEM BOUNDARIES

This is a Cradle to gate with options, modules C1-C4 and module D EPD. The life cycle stages included are as shown below:

(X = module included, ND = module not declared)

A1	A2	A3	A4	A5	B1	B2	B3	B4	B5	B6	B7	C1	C2	C3	C4	D
X	X	X	X	X	ND	ND	ND	ND	ND	X	ND	X	X	X	X	X

The modules of the EN 15804 contain the following:

Module A1 = Raw material supply	Module B5 = Refurbishment
Module A2 = Transport	Module B6 = Operational energy use
Module A3 = Manufacturing	Module B7 = Operational water use
Module A4 = Transport	Module C1 = De-construction / Demolition
Module A5 = Construction - Installation process	Module C2 = Transport
Module B1 = Use	Module C3 = Waste Processing
Module B2 = Maintenance	Module C4 = Disposal
Module B3 = Repair	Module D = Benefits and loads beyond the product system boundaries
Module B4 = Replacement	

3.4 REPRESENTATIVENESS

This EPD is representative for Presence detector - 4000 series, a product of Steinel GmbH. The results of this EPD are representative for European Union.

3.5 CUT-OFF CRITERIA

Manufacturing stage (Module A1-A3)

All input flows (e.g. raw materials, transportation, energy use, packaging, etc.) and output flows (e.g. production waste) are considered in this LCA. The total neglected input flows do therefore not exceed the limit of 5% of energy use and mass.

3 Calculation rules

Construction stage (A4-A5)

All input flows (e.g. transportation to the construction site, additional raw material use for construction, installation energy (use) of energy use for assembly, etc.) and output flows (e.g. construction waste, packaging waste, etc.) are considered in this LCA. The total neglected input flows do therefore not exceed the limit of 5% of energy use and mass

Usage stage (Module B6)

All (known) input flows (e.g. raw materials, transportation, energy use, packaging, etc.) and output flows (e.g. emissions to soil, air and water, construction waste, packaging waste, end-of-life waste, etc.) related to the building fabric are considered in this LCA. The total neglected input flows do therefore not exceed the limit of 5% of energy use and mass.

End of product life stage (Module C1-C4)

All input flows (e.g. energy use for demolition or disassembly, transport to waste processing, etc.) and output flows (e.g. end-of-life waste processing of the product, etc.) are considered in this LCA. The total neglected input flows do therefore not exceed the limit of 5% of energy use and mass.

Benefits and loads beyond the system boundary (Module D)

All benefits and loads beyond the system boundary resulting from reusable products, recyclable materials and/or useful energy carriers leaving the product system are considered in this LCA.

3.6 ALLOCATION

Steinel determined the electricity, gas, oil and water consumption per product for the sites by dividing the annual consumption by the production figures for all products manufactured at the site.

Polluter pays principle is applied for allocation.

3.7 DATA COLLECTION & REFERENCE PERIOD

The data was collected in the period Jan.-Dec. 2023.

3.8 ESTIMATES AND ASSUMPTIONS

Generic data from the ecoinvent v.3.6 database (system model allocation, cut-off) were used for primary products, raw materials and supplies as well as energy generation and disposal processes. Purchased parts for which no generic data was available were accounted for on the basis of the material composition.

The highest proportion of environmental impacts is caused by the use phase, which is, however, based on assumptions about the daily usage time. For this reason, an average period of use was selected. However, even with a minimum daily usage time, the contribution of the usage phase would dominate.

Use-Stage:

To balance the usage phase, the scenario for an active product was selected in which the sensor consumes 80% of the load hours in standby mode with a consumption of 0.1 W. The sensor is active 20% of the time and consumes 0.9 W. The detector is never switched off. The presence detector consumes 22.8 kWh over a period of 10 years.

The currently used Scenario is representative for one of the most likely scenario alternatives

Transport to construction site:

The customers of Steinel are B2B as well as B2C customers. This means that either partners with their own storage space or customers can be supplied directly.

An average distance of 500 km was used to calculate the transport to the customer.

Waste Scenario:

For disposal purposes, it is assumed that the presence detector are recycled as electronic waste. The cut-off approach is used for recycling, whereby the secondary use of the material is cut off.

Excluded processes are:

Long-term emissions

The manufacture of equipment used in production, buildings or any other capital goods;

3 Calculation rules

The transport of personnel to the plant;
The transportation of personnel within the plant;
Research and development activities.

3.9 DATA QUALITY

The data for the manufacturing of the product are average values derived from an analysis of the factory over 12 months in year 2023. The primary data used is no more than 5 years old. The data on which the calculation is based is consistent, comparable and up-to-date. The necessary background data comes from the Ecoinvent database 3.6.

The data quality can be rated as medium to good. For the most parts, the materials could be assigned directly to a generic data set, although substitutes had to be used in some cases. If no direct assignment was possible, preliminary products were balanced on the basis of their material composition. Assumptions were made for the associated masses.

3.10 POWER MIX

The electricity profiles were selected by using a market-based-approach, aligned with the geographical reference area, as defined in Ecoinvent 3.6. The electricity it uses has the following Global Warming Potential (GWP-total). The hydro energy is modelled based on the GOs for the year 2023.

Germany: Steinel electricity mix (100% Hydropower) - 0.076 kg CO₂e per kilowatt-hour (kWh)

Switzerland: 1kWh Electricity, low voltage {CH}| electricity, low voltage, residual mix | Cut-off, U - 0.026 kg CO₂e per kilowatt-hour (kWh)

Romania: 1kWh Electricity, low voltage {RO}| electricity, low voltage, residual mix | Cut-off, U - 0.382 kg CO₂e per kilowatt-hour (kWh)

4 Scenarios and additional technical information

4.1 TRANSPORT TO CONSTRUCTION SITE (A4)

For the transport from production place to assembly/user, the following scenario is assumed for module A4 of this EPD.

	Value and unit
Vehicle type used for transport	(ei3.6) Lorry (Truck), unspecified (default) market group for (GLO)
Fuel type and consumption of vehicle	not available
Distance	500 km
Capacity utilisation (including empty returns)	50 % (loaded up and return empty)
Bulk density of transported products	inapplicable
Volume capacity utilisation factor	1

4.2 ASSEMBLY (A5)

The following information describes the scenarios for flows entering the system and flows leaving the system at module A5.

FLOWS ENTERING THE SYSTEM

There are no significant environment impacts as a result of materials or energy used in the construction stage (A5).

FLOWS LEAVING THE SYSTEM

The following output flows leaving the system at module A5 are assumed.

Description	Value	Unit
Output materials as result of loss during construction	0	%
Output materials as result of waste processing of materials used for installation/assembly at the building site	0.000	kg
Output materials as result of waste processing of used packaging	0.070	kg

4.3 OPERATIONAL ENERGY USE (B6)

Description	Service cycle (yr)	Number of cycles (n)	Amount per cycle	Total Amount	Unit
Stromverbrauch (kWh/a)	1	10.00	2.2776	22.78	kWh

4 Scenarios and additional technical information

4.4 DE-CONSTRUCTION, DEMOLITION (C1)

No inputs are needed for the product at the de-construction / demolition phase

4.5 TRANSPORT END-OF-LIFE (C2)

The following distances and transport conveyance are assumed for transportation during end of life for the different types of waste processing.

Waste Scenario	Transport conveyance	Not removed (stays in work) [km]	Landfill [km]	Incineration [km]	Recycling [km]	Re-use [km]
Plastic waste	(ei3.6) Lorry (Truck), unspecified (default) market group for (GLO)	0	100	150	50	0
Steel, fasteners (NMD ID 69)	(ei3.6) Lorry (Truck), unspecified (default) market group for (GLO)	0	100	150	50	0
Electronic waste	(ei3.6) Lorry (Truck), unspecified (default) market group for (GLO)	0	100	150	50	0
Copper, mixed (electricity cables) (NMD ID 42)	(ei3.6) Lorry (Truck), unspecified (default) market group for (GLO)	0	100	150	50	0
Paper	(ei3.6) Lorry (Truck), unspecified (default) market group for (GLO)	0	100	150	50	0

The transport conveyance(s) used in the scenario(s) for transport during end of life has the following characteristics.

	Value and unit
Vehicle type used for transport	(ei3.6) Lorry (Truck), unspecified (default) market group for (GLO)
Fuel type and consumption of vehicle	not available
Capacity utilisation (including empty returns)	50 % (loaded up and return empty)
Bulk density of transported products	inapplicable
Volume capacity utilisation factor	1

4 Scenarios and additional technical information

4.6 END OF LIFE (C3, C4)

The scenario(s) assumed for end of life of the product are given in the following tables.
First the assumed percentages per type of waste processing are displayed, followed by the assumed amounts.

Waste Scenario	Region	Not removed (stays in work) [%]	Landfill [%]	Incineration [%]	Recycling [%]	Re-use [%]
Plastic waste	DE	0	0	9	91	0
Steel, fasteners (NMD ID 69)	DE	0	1	0	99	0
Electronic waste	DE	0	5	35	60	0
Copper, mixed (electricity cables) (NMD ID 42)	DE	0	10	5	85	0
Paper	DE	0	0	0	100	0

Waste Scenario	Not removed (stays in work) [kg]	Landfill [kg]	Incineration [kg]	Recycling [kg]	Re-use [kg]
Plastic waste	0.000	0.000	0.016	0.161	0.000
Steel, fasteners (NMD ID 69)	0.000	0.000	0.000	0.003	0.000
Electronic waste	0.000	0.002	0.011	0.020	0.000
Copper, mixed (electricity cables) (NMD ID 42)	0.000	0.000	0.000	0.000	0.000
Paper	0.000	0.000	0.000	0.010	0.000
Total	0.000	0.002	0.027	0.194	0.000

4.7 BENEFITS AND LOADS BEYOND THE SYSTEM BOUNDARY (D)

The presented Benefits and loads beyond the system boundary in this EPD are based on the following calculated Net output flows in kilograms and Energy recovery displayed in MJ Lower Heating Value.

Waste Scenario	Net output flow [kg]	Energy recovery [MJ]
Plastic waste	0.161	0.498
Steel, fasteners (NMD ID 69)	0.002	0.000
Electronic waste	0.017	0.005
Copper, mixed (electricity cables) (NMD ID 42)	0.000	0.000
Total	0.190	0.504

4 Scenarios and additional technical information

Waste Scenario	Net output flow [kg]	Energy recovery [MJ]
Paper	0.010	0.000
Total	0.190	0.504

5 Results

For the impact assessment long-term emissions (>100 years) are not considered. The results of the impact assessment are only relative statements that do not make any statements about end-points of the impact categories, exceedance of threshold values, safety margins or risks. The following tables show the results of the indicators of the impact assessment, of the use of resources as well as of waste and other output flows.

CLASSIFICATION OF DISCLAIMERS TO THE DECLARATION OF CORE AND ADDITIONAL ENVIRONMENTAL IMPACT INDICATORS

ILCD classification	Indicator	Disclaimer
ILCD type / level 1	Global warming potential (GWP)	None
	Depletion potential of the stratospheric ozone layer (ODP)	None
	Potential incidence of disease due to PM emissions (PM)	None
ILCD type / level 2	Acidification potential, Accumulated Exceedance (AP)	None
	Eutrophication potential, Fraction of nutrients reaching freshwater end compartment (EP-freshwater)	None
	Eutrophication potential, Fraction of nutrients reaching marine end compartment (EP-marine)	None
	Eutrophication potential, Accumulated Exceedance (EP-terrestrial)	None
	Formation potential of tropospheric ozone (POCP)	None
	Potential Human exposure efficiency relative to U235 (IRP)	1
	Abiotic depletion potential for non-fossil resources (ADP-minerals&metals)	2
ILCD type / level 3	Abiotic depletion potential for fossil resources (ADP-fossil)	2
	Water (user) deprivation potential, deprivation-weighted water consumption (WDP)	2
	Potential Comparative Toxic Unit for ecosystems (ETP-fw)	2
	Potential Comparative Toxic Unit for humans (HTP-c)	2
	Potential Comparative Toxic Unit for humans (HTP-nc)	2

5 Results

ILCD classification	Indicator	Disclaimer
	Potential Soil quality index (SQP)	2
Disclaimer 1 – This impact category deals mainly with the eventual impact of low dose ionizing radiation on human health of the nuclear fuel cycle. It does not consider effects due to possible nuclear accidents, occupational exposure nor due to radioactive waste disposal in underground facilities. Potential ionizing radiation from the soil, from radon and from some construction materials is also not measured by this indicator.		
Disclaimer 2 – The results of this environmental impact indicator shall be used with care as the uncertainties on these results are high or as there is limited experienced with the indicator.		

5.2 INDICATORS DESCRIBING RESOURCE USE AND ENVIRONMENTAL INFORMATION BASED ON LIFE CYCLE INVENTORY (LCI)

PARAMETERS DESCRIBING RESOURCE USE

5 Results

5.3 INFORMATION ON BIOGENIC CARBON CONTENT PER PIECE

BIOGENIC CARBON CONTENT

The following Information describes the biogenic carbon content in (the main parts of) the product at the factory gate per piece:

Biogenic carbon content	Amount	Unit
Biogenic carbon content in the product	0	kg C
Biogenic carbon content in accompanying packaging	0.03135	kg C

UPTAKE OF BIOGENIC CARBON DIOXIDE

The following amount of carbon dioxide uptake is taken into account. Related uptake and release of carbon dioxide in downstream processes are not taken into account in this number although they do appear in the presented results. One kilogram of biogenic Carbon content is equivalent to 44/12 kg of biogenic carbon dioxide uptake.

Uptake Biogenic Carbon dioxide	Amount	Unit
Packaging	0.115	kg CO2 (biogenic)

6 Interpretation of results

The chart shows the contribution analysis in the individual modules. It can be seen that the greatest impact on the environment is caused by the manufacturing of the presence detectors and their use in the usage phase. The environmental impact during the use phase depends on the country's electricity mix and the installation situation. The impact can therefore vary.
