

### **GTL5-AL Alunimium Grommet**

- GTL5-AL Aluminium Grommet

Based on the popular GTLC5 grommet dimensions, the GTL5-AL is designed for installation in prestige or high load areas where a plastic finish may not be desirable. The GTL5-AL has an attractive brushed aluminium surface finish and can be used as an access grommet, cabled grommet or fitted with power and data plates to form a mini circular floor outlet. The grommet opening is large enough, when the lid is removed, to retrieve items under the raised floor by hand.

- 127mm diameter cut out
- Floor loading of 250kg
- If used as a power grommet the unit must be earthed.
- Lid is attached to the grommet body with an earth strap.
- Power and data plates can be attached to the base of the grommet.
- 2 built in clamping arms hold the grommet firmly in place within the floor panel.
- An air and dirt seal foam gasket is fitted to the cable mouth.
- Cable opening is adjustable to suit cable size
- Lid can be screw fixed to main housing to prevent the lids unauthorised removal.

Overall Dimension :

140mm diameter

Cut Out Dimension :

127mm diameter

Max Cable Opening :

75mm x 32mm
