REACH information

The REACH regulation (EG) 1907/2006 is a European Union regulation with the purpose of restricting the use of substances harmful to human health and the environment.

In accordance with REACH a candidate list of substances of very high concern (SVHC) is maintained by the European Chemicals Agency (ECHA). Any company that imports or produces products that contain more than 0.1% by weight of any listed substance and in total imports or produces more than 1 tonne annually of a listed substance is required to notify and register with ECHA.

Products imported or produced by Linjator AB do not contain in excess of 0.1% by weight of any substance included on the ECHA SVHC Candidate list as of 2024-09-19, nor does Linjator import or produce in excess of 1 tonne annually of any substance included on the ECHA SVHC candidate list as of 2024-09-19.
